I've never really liked working with curves in Maya (or any 3D software for that matter), they are just pretty unintuitive for me. I'm really familiar with vector graphics which almost makes Maya's curve system more annoying since I'm used to something more streamlined. The non-destructive nature of curves on the other hand is very attractive. Having a mesh that can easily be edited without worrying about every vert is super time saving.

I used **Revolve** to make a bunch of pots for my scene inspired by some old-fashioned pots I found on Pinterest. I had to eliminate some dense topology using edge select (I learned a nifty new trick of using "CTRL Delete" to delete edges and vertices at the same time) I also used Sweep Mesh to make twisty handles for one of the pots.

Also, I added shelves to my room a couple weeks ago.
