This week I mainly focused on redesigning my scene, I previously had a design that I quickly realized was too complex for this assignment and decided to do an isometric room instead. The thing I struggled with the most (before changing my plans and deleting garbage) was architecture. Honestly, every time I try to do architecture (and by architecture, I mean a building with space inside, not architectural pieces like a window) in my models I really struggle, something about modeling more spatially inside out throws me off. For this section I modeled the window and the walls. I used **Extrude** to build out the window based on a blueprint I made, I used **Bevel** on every edge in the scene because to do otherwise is an unforgivable, cardinal sin, I used **Merge** and **Combine** to combine two sides of an object, and **Snapping** pissed me off when I accidentally activated it for every single tool and had to methodically go through and de-activate it for each one, also I probably used it for something useful maybe. Overall, 10/10 week 👍 😊
