

GIT REPO: <https://github.com/Shadowisp911/DAGV-Essentials/tree/main/DAGV1100and1200/Maya/scenes/Maya%20Interior%20Assignment>

Writeup:

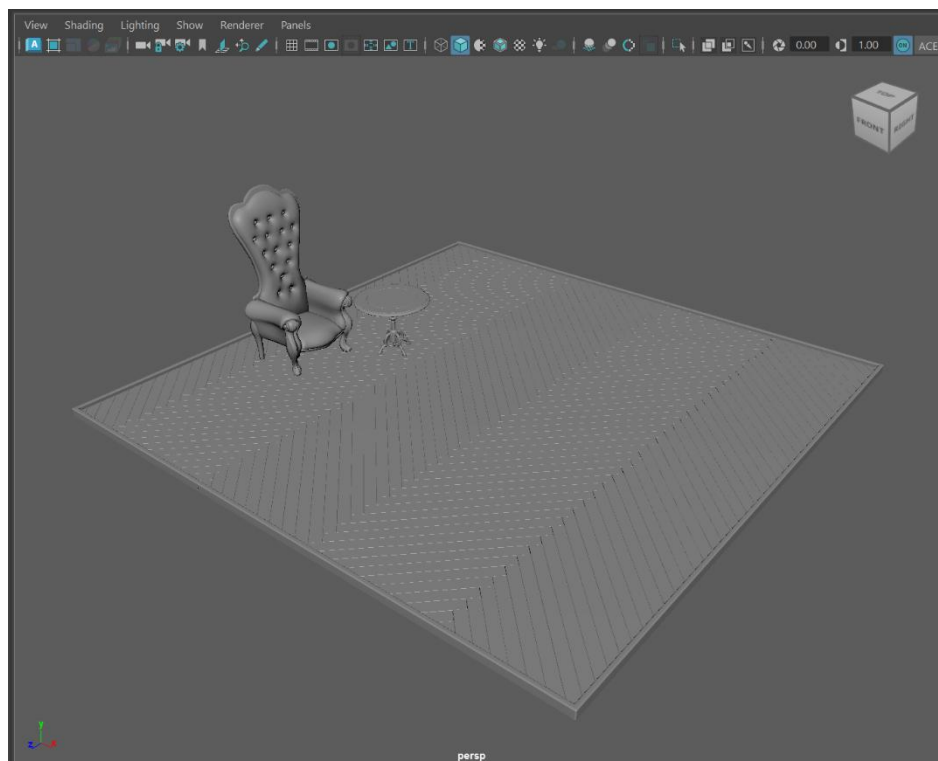

Ah Maya. I worked in Maya quite a bit in high school, but have since learned to use Blender. The biggest thing that was tripping me up on this assignment was adjusting my workflow. I used **Extrude** to build the topology and **Snap to Vert** to move the pivot point. I also used **Scale**, **Rotate**, and **Transform** while making this.

Le Chair: thing that took me the longest was figuring out the topology for the cushion on the back, which I'm still not really happy with, but I figured I could let it be for now (*if you have any advice I would love to hear it!!*). I learned about Lattice Deforms and used one to adjust the shape of my chair (super useful tool, I absolutely love it). For the chair my workflow was building up topology starting with a cube and smoothing it (those little swirly armrests were a little complicated as well).

Le Table: I planned out each shape in Affinity (like Adobe Illustrator) added an image plane and used plane primitives to build up the topology, then extruded them and beveled to build shape. I also used cylinders for the middle part and top. I am planning on trying to incorporate a Gothic style into this piece.

Overall, my biggest struggle was transitioning from a super non-destructive workflow in Blender and also working on the weird organic topology for the chair. I've really been wanting to figure out organic shapes and hope to work on that a bit on this project.

Sorry, I guess this was longer than 100 words heh...

## Emma Brown – Unit 1: Maya Interior – Chair, Table, Floor
